Cumulant expansion of the three-body terms

generated by `cumulant_expansion.py`

The three-body operators surviving the space restriction are decomposed into two-body and one-body operators (plus scalar terms) with density-matrix coefficients, using the spin-free cumulant decomposition of `cumulant_decomposition/spin_free/spin_free.tex`:

This is an operator identity: the labels p, q, r, s, t, u are fixed on both sides, so no index may be renamed; only the index pairs of each operator can be permuted together (the diagonal pair-permutation symmetry of the spin-summed $\hat{E}$, no sign). With the terms grouped by the operator in this sense, the decomposition reads

$$\begin{aligned}

(19 operator groups; a group with no $\hat{E}$ shown is the scalar part.) The $\approx$ drops the normal-ordered three-body remainder and the three-cumulant λ^{pqr}_{stu}; for a single-determinant reference $\lambda_3 = 0$ identically. Every density matrix carrying a virtual index vanishes; density matrices with occupied or whole-space indices are kept symbolic as D^{i}_{j}, D^{ij}_{kl}, ... (no delta-function substitution). The formula is verified numerically for a closed-shell single-determinant reference on Jordan–Wigner matrices (random index assignments with and without the virtual rule).

1 Final blocks

Only the blocks containing surviving three-body terms change; the three-body pieces are decomposed and merged back into the block. Blocks not shown are unchanged from `space_restriction.tex`.

$\left[\hat{V},\,\hat{T}_2\right]$

after the space restriction (2 terms, 1 three-body):

$$\left[\hat{V},\,\hat{T}_2\right] = \tfrac{1}{2}\,g^{a_1a_2}_{p_1p_2}t^{a_1a_2}_{i_1i_2}\hat{E}^{p_1p_2}_{i_1i_2} \tag{39}$$

each three-body term is decomposed with the grouped identity. Every template index appears in exactly one factor of each piece, so a whole operator group survives or dies together: a group survives iff its operator carries every virtual index of the pattern; in particular the scalar part (pure density matrices) always vanishes. The surviving groups are: 9 of the 19 groups survive (6 two-body, 3 one-body):
